Small BMP Treatments Form

TRPA Stormwater Management Program | BMP Hotline (775) 589-5202 | bmp@trpa.gov

For BMP retrofit projects that disturb or grade less than 10 cubic yards of soil. Not for projects with engineered structures, extensive grade alterations, excavations over 5 feet, paving more than 400 square feet, subsurface conveyance systems (piping) and drop inlets, or infiltration systems capturing runoff from more than 2,500 square feet; those need a BMP Retrofit Permit.

Label each BMP on the site plan (A, B, C or 1, 2, 3), list the same label here with the treatment from the NRCS standard drawings and its dimensions, and submit this form with the site plan and the Calculation Spreadsheet through Accela Citizen Access. The review, the permit, and the final inspection are free.

Small BMP Treatments Form

TRPA Stormwater Management Program | BMP Hotline (775) 589-5202 | bmp@trpa.gov

This BMP site design is for the installation of Best Management Practices only. It is not a verification of land coverage, land capability, unit of use, or other development capacities regulated by the Tahoe Regional Planning Agency (TRPA), nor is it a conceptual approval of any unrelated future project. These verifications require the submittal of a separate application to TRPA for review and approval. The property owner is ultimately responsible for the selection, installation, performance, and maintenance of the BMPs on their property.

FOR TRPA USE ONLY

☐ Based on the information provided, this design meets the requirements of Chapter 60.4 of the TRPA Code of Ordinances.
